Financial Data Portfolio

Qlik DataMarket has a portfolio of financial data that includes key information from 35 major stock exchanges such as price quotes and key indicators for securities along with detailed balance sheets, income statement and cash flow statements.

Qlik's Associative Model

Qlik's Associative Model enables users to probe all the possible associations in their data, across all their data sources. People of all skill levels can explore freely, using simple selections and searches, without restrictions or boundaries.

Unlike query-based visualization tools, Qlik users are not limited by predefined hierarchies or preconceived notions of how data should be related. Instead, they can fully explore and understand how it is truly related.

The Data Packages

Stocks and Indices

The Stocks and Indices package includes daily stock prices and indices from 35 major stock exchanges. Additional daily key metrics, (such as high/low price, open/close price, split ratio, absolute & relative change), increase the amount of insight that can be gained on securities analysis.

Company Financial Reports

The Company Financial Reports package includes the detailed balance sheets, cash flow statements and income statement of publically traded companies from over 35 major stock exchanges. Having this information for a single company can be very insightful, however having all of this information for 10,000's of companies can be truly game changing. Open up opportunities for comparison and benchmarking like never before.

More Insight with More Data

Qlik DataMarket also includes a wealth of social, economic, demographic, exchange rates and weather related data that can add further insight into the external factors impacting the markets. Understand the impact of macro economics, changing weather patterns and currency fluctuations on the markets and your business.

Complete Data Service

Qlik DataMarket provides a complete cloud-based data service with a wide range of data provided through fully curated data sets from known sources via a subscription model that is always up-to-date and ready, enabling enterprises to gain new insights into their business by enriching the context of their internal data and having an outward-facing data view approach.
