

# Qlik® for network governance

Ensuring data quality and governance is top-of-mind for IT professionals. Qlik offers data discovery capabilities that unlock the power of information for network governance.

Qlik visual analytics allows IT users to gain insight into their infrastructure, helping them to spot unusual activity and remediate potential risks to the organization.

From high level system monitoring to the granular analysis of logs, Qlik provides the platform for data discovery, and enables IT to make more informed business decisions.

With Qlik, IT can align with business strategy and growth, efficiently managing project resources and governing enterprise infrastructure with full visibility to investigate any operational issue.

## Key solution benefits

### Improved log analysis

IT infrastructures generate enormous amounts of logs that contain vital data for key insights and network security intelligence, every day.

- Analysis of event logs shifts from a manual, time consuming process to an interactive and advanced automated platform
- Users optimize data governance, security, and scalability across the entire enterprise
- Empowers a proactive response via a quick view into where errors have increased based on selections

### Complete system monitor

- Flexibility for complete system monitoring and alerting for servers, switches, applications, and services
- Instant awareness of infrastructure problems, helping for quick reaction so downtime does not adversely affect the business
- Administrators easily identify & investigate unusual activity, share availability dates with stakeholders, and plan/budget for IT upgrades to align accurately with business growth

### Efficient project management

- IT organizations can execute capacity planning, organize and manage resources, and forecast estimates for any project
- Enables sophisticated analysis including estimation, scheduling, cost control, budget management, collaboration, decision making, quality management, and documentation
- Helps IT professionals minimize and remediate potential risks on any project
