

DATA SHEET

Qlik Sense Mobile for BlackBerry

INTRODUCTION

Qlik Sense Mobile® for BlackBerry® is an iOS app that delivers the power of Qlik Sense on iPhone and iPad devices, built on top of the BlackBerry® Dynamics Secure Mobility Platform. It provides a complete set of analytics capabilities both online and offline, all within a BlackBerry® certified secure platform for personal and corporate iOS devices used in the workplace.

BlackBerry® Dynamics serves as the foundation for secure enterprise mobility by offering an advanced container for mobile apps that can be managed without requiring administrative control over the entire device. Bring Your Own Device (BYOD) policies are becoming increasingly common, and organizations rely on mobile device management (MDM) to govern the business use of personal devices.

The power of associative analytics, online and offline

Qlik Sense® features powerful capabilities on mobile devices that provide a truly interactive experience, bringing answers directly to the point of decision. The Qlik Associative Engine allows free-form, non linear search and exploration, not just the static content typically found in mobile analytics apps. Responsive design intelligently optimizes visualizations and data for mobility, and an intuitive, multitouch interface streamlines the user experience. Because Qlik Sense is inherently mobile, there is no need to rebuild apps or optimize them in any way for mobile use.

The Qlik Sense® Mobile app takes this a step further by running the powerful Qlik Associative Engine locally on iOS, unlocking the same interactive, associative experience regardless of whether a connection is available. When online, users can leverage the power of the enterprise server for full exploration, creation, and collaboration, and can also download data for fully interactive associative exploration when there is no connection.

Security and governance for your analytics

BlackBerry® Dynamics provides secure deployment and configuration of mobile apps including Qlik Sense® Mobile for BlackBerry®. This includes a complete set of mission critical features required by the most demanding enterprises, such as:

- Secure application provisioning
- Secure container encryption
 - Data-in-transit to the device
 - Data-at-rest on the mobile device
- App control on-device
- Data loss and leakage prevention
- Auditing and compliance controls

In addition to BlackBerry Dynamics, Qlik Sense offers a fully governed, self-service oriented environment for analytics apps and data, including centralized libraries of content, rules-based security, and dynamic data reduction, whether running online or offline on the mobile devices.

About Qlik

Qlik is on a mission to create a data-literate world, where everyone can use data to solve their most challenging problems. Only Qlik's end-to-end data management and analytics platform brings together all of an organization's data from any source, enabling people at any skill level to use their curiosity to uncover new insights. Companies use Qlik products to see more deeply into customer behavior, reinvent business processes, discover new revenue streams, and balance risk and reward. Qlik does business in more than 100 countries and serves over 48,000 customers around the world.
