

Qlik® Platform and Infrastructure Services

Technical services to establish or optimize your Qlik foundation

Your Qlik platform is the foundation that empowers your organization to see the whole story that lives within your data. If you are new to Qlik, how do you establish the right foundation to support your analytics needs today? As your experience with Qlik grows, what's the best way to scale and optimize your platform to serve your business needs as you evolve? How do you ensure that your corporate security policies also consistently protect your analytics operations from the start?

Qlik Platform and Infrastructure Services, delivered by Qlik Consulting, reduce time and risk when establishing and optimizing your Qlik foundation—whether you are running analytics on-premise, in the cloud or in a hybrid environment. We help you understand the changes you need to the Qlik platform as your needs evolve, with the goal of making you proficient in using Qlik so you can continue to deliver high value to your organization.

Leverage proven expertise in analytics architecture

Establish a foundation that evolves with you

We help you get users up and running fast on a high-performing foundation without taxing your staff or maintenance budget.

- Ensure your platform can deliver the performance you need
- Accelerate platform enablement
- Minimize maintenance cost and effort

Optimize performance as you grow and change

We help you deliver more value across your organization on a timely basis, keeping user satisfaction high.

- Successfully scale for increased capabilities, data and usage
- Achieve your goals for performance and maintainability
- Enable analytics across different platforms

“The consulting team was given high-level requirements and tight time frame to deliver. They worked closely with our internal team to design and implement a scalable solution that I could manage on my own. Now we have a close relationship for ongoing architecture services and expertise.”

“I was impressed with their level of expertise. They got it right on the first try and were flexible in an agile environment.”

*IT Manager, Global 500
Banking Company*

Protect your data

We help you extend your security requirements across analytics operations.

- Design a security strategy that provides consistent, predictable access
- Give users the visibility and permissions to which they are entitled
- Ensure compliance with your unique corporate security policies or your governance strategy

How we do it

Our technical services experts work closely with your team to design an architecture that can deliver on your business analytics requirements starting from the installation and configuration of the optimum platform. As your requirements and the scope of your use of analytics change, we can empower you with the knowledge and capabilities to successfully monitor and manage your own environment. To keep user satisfaction high (and maintenance costs low), we'll work with your teams to conduct health checks and performance testing to ensure your platform and infrastructure are configured optimally for your growth. We also can help secure your platform and data from unauthenticated or unauthorized users—and ensure you remain in compliance with your corporate security policies.

Server Architecture Services

Ensure your platform and infrastructure are appropriately sized and scaled.

Architecture definition • Future state planning • Platform installation, upgrades, migrations & governance

Performance Services

Be prepared for the impact of change (user volume, new applications, upgrades/migrations) on server performance.

Benchmark testing • Performance testing • Health checks

Security Setup

Minimize risk by establishing a clear and consistent security strategy for the Qlik platform.

Security definition • Security integration • Application & data access security • Platform integration • Custom web application integration

Technical Services

In addition to Platform & Infrastructure Services, Qlik Consulting also offers the following technical services:

- **Data Services** to help you get the most out of your data
- **Visual Analytics Services** to empower users to find meaningful

For more information on how Qlik Consulting can partner with your organization to help you maximize the value from your Qlik solutions, please visit our website at qlik.com/consulting.

Qlik® Data Services

Technical services to capitalize on your data for Qlik applications

You've taken the first step in giving your business users access to important new insights that live within your data. But how do you ensure that users will be working with the most relevant and valuable data available for their specific requirements at any given time? What strategies could help you maximize the efficiency and effectiveness with which Qlik applications use your data? Looking ahead, as your use of analytics grows, how do you stay on top of governance and promote greater self-service?

Qlik Data Services, delivered by Qlik Consulting, enable you to put in place best practices for data management and leverage and/or optimize the data structures in which you've invested—whether they are on-premise, in the cloud or in a hybrid environment. Qlik Data Services can give you the help you need whether you are in the planning stages of data analytics, have an enterprise data warehouse, or you have already implemented or are investing in Big Data initiatives.

Get the most out of your data

Use valuable data today while building for tomorrow
We help you understand your data requirements and use analytics best practices to reach your strategic goals

- Set up your data so it fits both short and long term requirements
- Integrate all of your data sources effectively
- Enable governed data self-service for greater productivity

Focus your resources on your most valuable data
We help you fine-tune your existing data structures so you get the most from your Qlik applications with the smallest data footprint.

- Ensure the highest data quality and consistency
- Make governance of data less time consuming
- Reduce time to create or modify analytics applications

“Qlik Consulting helped us create a very competitive solution by combining our data with our customers’ data, which was useful for both parties.”

“They focused on helping the customer be successful, quickly.”

Get a better return from your data investment

We help ensure you get the best value from your existing data resources while extending your analytics operations for even greater insights.

- Identify opportunities to improve timeliness, performance and scalability of data
- Connect to the right data at the right time to deliver insights to the right people
- Unleash the power of Big Data by making it accessible to business users

How we do it

Our technical services experts have worked with hundreds of customers to assess and integrate a wide range of data sources in many different environments. We can help with your unique requirements no matter where you are in your analytics journey: advising on the optimum data architecture, developing specialized data strategies, evaluating data quality for improvement, or implementing recommended changes. Our specialists also utilize Qlik technologies specifically developed to facilitate the governance, self-service and performance of data integration as well as reduce the time to develop and modify applications.

Data Integration & Modeling

Define the data model and integration plan that best meets your requirements for fast and easy application development and modification

Data integration definition • Data loading and modeling • Structured ETL Engine for Qlik

Data Quality & Management

Identify opportunities for improving the quality of data and its governance both inside and outside of Qlik

Data refresh enablement • Data quality assessment and remediation • Data governance

Big Data Services

Understand how to tune your environment and develop Qlik applications to access Big Data

Big Data assessment • On-Demand Application Generation (ODAG)

Technical Services

In addition to Data Services, Qlik Consulting also offers the following technical services:

- **Platform & Infrastructure Services** to leverage proven expertise in analytics architecture
- **Visual Analytics Services** to empower users to find meaningful

Qlik® Visual Analytics Services

Technical services to maximize user engagement with analytics

You've put in place a powerful set of capabilities for business users to gain new insights that live within your data. But how do you ensure they use these capabilities to their full potential for making decisions that most benefit your business? How do you help them with visualizations that promote the use of analytics in their daily lives, doing their jobs faster and better?

Qlik Visual Analytics Services, delivered by Qlik Consulting, helps you engage users early in the design process to ensure that analytics are designed to show them answers to the questions most important to them. We do this whether users are working on a desktop on-premise, or a mobile device leveraging the cloud, or working in a hybrid environment. This user-centered design philosophy helps accelerate the adoption of new applications and keep user satisfaction high as your analytics applications evolve.

Empower users to find meaningful insights

Delight users from the start

We help you design and build applications that encourage users to interact with analytics without restricting access.

- Use experts to design applications that give users what they *really* need
- Accelerate delivery of applications users want and need
- Give users a voice in the design process, making it fun and engaging

Meet users' rapidly changing needs

We help you maintain a high level of user satisfaction with analytics applications that keep pace with their business needs.

- Use experts to assess areas for improvement of highest value
- Fine-tune applications to make them more usable and easier to maintain
- Let experts guide you through non-disruptive transitions

“Qlik Consulting helped us migrate a full data model and dashboards from QlikView to Qlik Sense in just a few days.”

Vice President, Medium Enterprise Computer Software Company

Optimize the user experience

We help you deliver a user experience that is consistent and makes users “feel at home” in using analytics, wherever they use them.

- Personalize the user experience to increase adoption of analytics
- Leverage the power of all of Qlik’s products to maximize your analytical capabilities
- Facilitate the design and development of industry-leading UI/UX practices across all applications

How we do it

Our technical services staff works closely with you to ensure applications are designed and developed with a clear understanding of how your organization will most effectively use and maintain them. We also assist you in assessing and improving the look and performance of existing or follow-on applications so they are consistent with your familiar corporate look and feel. We can help you anticipate and minimize the impact on users when you plan an expansion, update or migration of applications—for example, to mobile platforms or web framework. We can enable your staff to design advanced visualizations for an enhanced user experience (UX), leveraging best practices as your use of analytics matures.

Application Development

Ensure Qlik applications are designed for maximum usability, rapid adoption and easy maintenance.

- Application discovery
- UI development
- Application assessment
- Upgrades / migration
- Application governance
- Administrative automation development
- GeoAnalytics
- NPrinting

Web & Mobile Development

Allow the benefits of applications to extend across multiple platforms and other applications.

- Custom extensions
- Embedded analytic services
- Web application assessment
- Custom web development
- Responsive mobile design and development

Advanced UI/UX Design

Increase user engagement and improve decision-making through advanced visualization and analytics design.

- User Interface (UI) design
- User Experience (UX) design
- UI/UX Enablement workshop

Technical Services

In addition to Visual Analytics Services, Qlik Consulting also offers the following technical services:

- **Platform & Infrastructure Services** to leverage proven expertise in analytics architecture
- **Data Services** to help you get the most out of your data
