

- Data is essential to support an agile supply chain. Direct Relief cannot predict when they will receive products from donors or when the products will be needed because world events can change in a day. Donated medical products with expiration dates are stored in warehouses across the globe and with shipping times and customs protocols could be wasted unless Direct Relief is able to move quickly and has full visibility to their supply chain.
- Using Qlik®, Direct Relief was able to unlock data trapped in SAP. They have visual analytics to support the entire logistics business, including dashboards displayed in warehouses to track outbound deliveries across the supply chain and trace completed deliveries across the globe.
- Qlik is proud to partner with Direct Relief and the rest of the Life Sciences community to bring relief to these communities in need.
